Files Resources   ☰

Files Resources

Information about files, including content, rendered version, and sharing. Information about asset files, including content and rendition.

Available resources are:

Resource	Description
/connect/files/*fileId*	Get information about a specified file, including references to external files. Upload a new version of an existing file, including references to external files. Rename a file, move a file to a different folder, and delete a file.
/connect/files/*fileId*/asset	Create an asset file.
/connect/file-assets/*assetId*	Get information about an asset file or change the visibility of an asset file for unauthenticated users.
/connect/file-assets/*fullyQualifiedName*/content	Get the streamed content of an asset file.
/connect/file-assets/*fullyQualifiedName*/rendition	Get up to 25 streamed renditions of an asset file. A rendition is a binary preview of the file.
/connect/file-assets/batch/*assetIds*	Get information about a comma-separated list of up to 100 asset files.
/connect/files/*fileId*/content	Returns the content of the file, including references to external files. The content is streamed as the body of the response.
/connect/files/*fileId*/file-shares	Get the users, groups, or records with which a file has been shared. Share a file with users.
/connect/files/*fileId*/file-shares/link	Get, create, and delete a file's share link.
/connect/files/*fileId*/image	Get information about a file image.
/connect/files/*fileId*/previews	Get information about a file's supported previews and generate up to 500 pages in a file preview.
/connect/files/*fileId*/previews/*previewFormat*	Get up to 500 pages in a file preview or get a specific page in a preview.
/connect/files/*fileId*/rendition	A rendition of the file. A rendition is a binary preview of the file. The format of the binary

/connect/files/batch/*fileIds*   Information about a list of files, specified by file IDs. Get information about a list of files and delete a list of files.
